

**REMARKS:**

Claims 1-19 are in the case and presented for consideration.

By this preliminary amendment, a correction has been made to render the application consistent with respect to the meaning of radicals B and B'.

Turning to the specification near the end of page 5, an example of the tetravalent platinum is given as formula (I) which is a complex of formula (II). From both the chemical name and the formula II disclosed on the bottom of page 5, the meaning of the radicals B and B' as an anionic ligand acetato- is correctly identified as  $\text{-O-C(O)-R}$  ( $\text{R=CH}_3$ ) and  $\text{-O-C(O)-R'}$  ( $\text{R'=\CH}_3$ ), which is different from the incorrect identification expressed as COOR or COOR'.

Formula or complex (II) is also disclosed in claim 4 as originally filed, which is a preferred example of formula (I) of claim 1.

Accordingly, no new matter has been added by this amendment and the amendment only represents a correction to make the application internally consistent as originally filed.

Entry of this amendment and favorable action is respectfully requested.

Respectfully submitted,

---
